

Wilmington Mass 18

My Dear Dr. Gray

I had written a
sentence to Miss Reynolds, at H. Me-
justin about the new *Palpina* descri-
ber to get complete specimens (and fruit
but had had no word from her. On
Friday last I went to their house, &
to see if any specimen, like it were there
and found none. Mr. Redfield was there
and told me she had come or was
about coming north and that he would
send me an address. He did so and
I have written to her asking her to send
fruit if possible or to get me in the
way of getting it if she was not in
to return to Florida soon and had some
now on hand. I had ^{very} naturally
ketches on the same
name that ~~we~~ saw ~~also~~ in ~~earlier~~

written on a description of a
with your own talent, that in
they this can be said enough, and
I shall think do nothing further,
to fix it up - which I think you
as better do than as others, notably
near the present. If I get any more I
will send it to you at once.

I enclose a specimen of a
from Mrs. Green (I am sure I have
~~written~~ specimens that by your des-
cription of *E. mayanico*. But I
suspect this to be really a larger &
another form of *E. Kallalii* which I
since you have taken out your own
specimens, seems to run amazingly.

Ever yours truly
J. R. Kallal

I put in Miss Rogers, care of the
Redford, giving her address. Please

if this letter returns it to him or to me

I must say that the note that I
for "Butane or (Cretaceous ...)"
and also, ^{sup} that I have taken care of
I expect them with the present
now. It is much more complete & better
than I suppose it would be and better
put at my disposal, &c.
Bristol, 11.1
